

STEEL PLUS Inventory Dashboard

Gain Access To Inventory Information From Multiple Locations With Ease And Accuracy

OVERVIEW

The STEEL PLUS Inventory Dashboard is designed for companies with multiple warehouse locations who need quick and easy access to important inventory information such as available stock levels and incoming inventory amounts. Users also have the ability to drill down to see a breakdown of inventory by size or by a value pre-defined by your company in a user-defined field. The user-defined field may be used to track "foreign" vs. "domestic" material, "on-hand" vs. "in-transit" inventory, or any other value you choose. Users can even view tag-level details such as heat numbers, mill reference numbers, and more.

BENEFITS

Users who need to check stock in multiple locations are often slowed down by navigating through multiple screens or even by entering the same Item ID into multiple sessions of STEEL PLUS. The new STEEL PLUS Inventory Dashboard is a separate program that runs alongside of STEEL PLUS. It can be configured to display an unlimited number of warehouses and can even display information from separate STEEL PLUS 2008 and STEEL PLUS/Classic data sets on the same screen!

IMPORTANT INFORMATION...FAST

The STEEL PLUS Inventory Dashboard makes it quick and easy to do all of these important tasks:

- View available quantities in multiple locations
- View incoming quantities in multiple locations
- View multiple items at the same time
- Display size summary information
- Drill down to view user-defined information
- View tag detail information
- View open purchase order details and receipt dates

REQUIREMENTS

The STEEL PLUS Inventory Dashboard requires the following:

- Relativity
- Windows 2003 Server running IIS
- Windows XP Pro, Vista Business, Windows 7
